Contents:

1101 A Direct-Push Crosshole (DPCH) Test Method for the In Situ Evaluation of High-Resolution P- and S-Wave Velocities—Brady R. Cox, Andrew C. Stolte, Kenneth H. Stokoe II, and Liam M. Wotherspoon

1133 A Hollow Cylinder Radial-Seepage Apparatus for Evaluating Permeability of Sheared Compacted Clay—Gang Wang, Xing Wei, and Ting Zou

1169 Alternate Procedures for Swell Index Testing of Granular Bentonite from GCLs—J. Scalia IV, C. H. Benson, and M. Finnegan

1185 Analysis of Vertical Piles Embedded in Organic Soil under Oblique Pull-Out Load—Mohd Hamid, Mohit Canakci, and Ahmed Naar

1207 Consolidated Undrained Shear Behavior of Synthetic Waste Rock and Synthetic Tailings Mixtures—Marios M. P. Hamade and Christopher A. Batchelor

1233 Development of an Innovative Liner Leak-Detection Technique—Lajja Mudda S. Pandey and Saroj Kumar Shukla

1246 Disagreeing Evaluations for Slug Tests in Monitoring Wells: Importance of Standards—Robert P. Chapuis

1274 Element Nail Pullout Tests for Prediction of Soil Nail Pullout Resistance in Expansive Clays—Changfu Chen, Genbao Zhang, Jorge Gabriel Zornberg, and Xinxiu Zheng

1301 A Tensile Strength Apparatus with the Facility to Monitor Negative Pore-Water Pressure—Ian Murray, Alessandro Tarantino, and Fernando Francescon

1359 Study on the Processes of Water and Grout Seepage in Porous Media Using Resistivity Method—Ziwei Qian, Zhenquan Jiang, and Yunzhang Guan

1370 The Mechanical Properties of Naturally Deposited Soft Soil under True Three-Dimensional Stress States—Hong Sun, Hailin Wang, Gang Wu, and Xiurun Ge

EDITORIAL OBJECTIVES
The Geotechnical Testing Journal is published in six issues per year by ASTM International, a nonprofit technical organization that develops and publishes voluntary consensus standards and related information for materials, products, systems, and services. Some issues, in whole or in part, may be Special Issues focused on a topic of interest to our readers. Contributions are peer reviewed prior to publication.

PURPOSE AND SCOPE
The purpose of the Geotechnical Testing Journal is (1) to provide a high-quality publication that informs the profession of new developments in soil and rock testing and related fields; (2) to provide a forum for the exchange of information, particularly that which leads to the development of new test procedures; and (3) to stimulate active participation of the profession in the work of ASTM International Committee D18 on Soil and Rock and related committees.

Contributions include papers, technical notes, letters to the editor, discussions of previously published papers, and book reviews. The editorial scope of this journal covers test methods for soil and rock, sampling, nomenclature, and practices relating to the determination of properties and behavior of soil and rock for engineering purposes, and for soil as a medium for plant growth. Topics of interest include: new testing equipment, apparatus, and procedures for both field and laboratory applications; evaluation of existing ASTM International standards and recommendations for new standards for apparatus or test procedures; and test results that give insights into test procedures, techniques, and data interpretation. Topics must be related to soil and rock, but may include use and testing of geosynthetic materials in conjunction with soil and rock, highway materials testing such as aggregate properties or pavement performance measurement, geophysical exploration, marine sediments, groundwater investigations, testing and stabilization of contaminated soils and soil and rock engineering related to waste management.
