Contents:

1  A Critical Review of Membrane and Filter Paper Correction Formulas for the Triaxial Testing of Soft Soils—Maria Konstadinou and Cor Zwanenburg

20  A CRS Oedometer Cell for Unsaturated and Non-Isothermal Tests—Mehtnad Bagheri, Mohaddeseh Mousavi, Nazhad, and Mohammad Rezania

38  A Fiber Bragg Grating-Based Inclinometer Fabricated Using 3D Printing Method for Slope Monitoring—Chengyu Hong, Yifan Zhang, and Zane Ahmed Abra

52  A New Small-Scale Test Apparatus for Modeling Buried Pipes under Axial or Lateral Soil Loading—Vera Barbosa Franco, Jefferson Lins da Silva, and Clever Aparecida Valentin

70  A Novel Experimental Technique to Investigate Soil-Pipeline Interaction under Axial Loading in Saturated and Unsaturated Sands—Mohammed Akhazouzi and Sai K. Vanapalli

113  DMT for Load-Settlement Curve Prediction in a Tropical Sandy Soil Compared to Plate Load Tests—Roberto A. Dos Santos, Breno P. Rocha, and Hernando L. Guarchi

132  Dynamic Behavior of a Granular Medium Subjected to Resonant Column Tests: Application to Ottawa Sand—Heinrich Pelle, Eliana Martínez, and Rubén Galindo

151  Experimental Study on Energy Consumption of Rock Cutting under Different Groove Geometry—Kaihua Zhu, Zheng Deng, and Wei Liu

171  Idealized Sine Wave Approach to Determine Arrival Times of Shear Wave Signals Using Bender Elements—Qasim Khan, Seng-Wai Mande, and TaeSeo Ku

194  Intrinsic Soil Damping from Cyclic Laboratory Tests with Average Strain Development—F. Lehto, C. Matthes, and K. H. Andersen

211  Laboratory Simulator for Geotechnical Penetration Tests—Mohamed Chekined, and Mourad Karray

235  On the Influence of Multiple Polarization Changes on the Cumulative Deformations in Sand Under Drained High-Cyclic Loading—T. Wichtmann and T. Hanstrøm

253  Physical Modeling of Stone Columns in Unsaturated Soil Deposits—Sajjad Vaseghi Maghavani, Reza Imam, and John S. McCartney

REVIEW PAPER

275  A New Cyclic Simple Shear Test Procedure with Multidirectional Loading—Viet Hung Le and Frank Rackwitz
Contents:

1  A Critical Review of Membrane and Filter Paper Correction Formulas for the Triaxial Testing of Soft Soils—Maria Konstadinou and Cor Zwanenburg
20  A CRS Oedometer Cell for Unsaturated and Non-Isothermal Tests—Meigndad Bagheri, Mohaddeseh Mousavi Nezhad, and Mohammad Rezania
38  A Fiber Bragg Grating–Based Inclinometer Fabricated Using 3-D Printing Method for Slope Monitoring—Chengyu Hong, Yifan Zhang, and Zain Ahmed Abro
52  A New Small-Scale Test Apparatus for Modeling Buried Pipes under Axial or Lateral Soil Loading—Vera Barbosa Franco, Jefferson Leis da Silva, and Clever Aparecida Valentin
70  A Novel Experimental Technique to Investigate Soil–Pipeline Interaction under Axial Loading in Saturated and Unsaturated Sands—Mohammad Akhoozali and Saj K. Vanapalli
113  DMT for Load-Settlement Curve Prediction in a Tropical Sandy Soil Compared to Plate Load Tests—Roberto A. dos Santos, Breno P. Rocha, and Heraldo L. Gochetti
132  Dynamic Behavior of a Granular Medium Subjected to Resonant Column Tests: Application to Ottawa Sand—Heindon Patiello, Elaina Martinez, and Ruben Galindo
151  Experimental Study on Energy Consumption of Rock Cutting under Different Groove Geometry—Yaxiu Zhu, Zhong Deng, and Wey Liu
171  Idealized Sine Wave Approach to Determine Arrival Times of Shear Wave Signals Using Bender Elements—Qasim Khan, Sung-Woo Moon, and Taeseo Ku
194  Intrinsic Soil Damping from Cyclic Laboratory Tests with Average Strain Development—F. Leveille, C. Matthes, and K. H. Andersen
211  Laboratory Simulator for Geotechnical Penetration Tests—Michael Ghali, Mohammad Chekired, and Mourad Karray
235  On the Influence of Multiple Polarization Changes on the Cumulative Deformations in Sand Under Drained High-Cyclic Loading—F. Wichmann and T. Thanatthyakis

Geotechnical Testing Journal: Volume 43, Number 1

Published by ASTM International  |  100 Barr Harbor Drive  |  PO Box C700  |  W. Conshohocken, PA 19428-2959
PURPOSE AND SCOPE
The purpose of the Geotechnical Testing Journal is (1) to provide a high-quality publication that informs the profession of new developments in soil and rock testing and related fields; (2) to provide a forum for the exchange of information, particularly that which leads to the development of new test procedures; and (3) to stimulate active participation of the profession in the work of ASTM International Committee D18 on Soil and Rock and related committees.

Contributions include papers, technical notes, letters to the editor, discussions of previously published papers, and book reviews. The editorial scope of this journal covers test methods for soil and rock, sampling, nomenclature, and practices relating to the determination of properties and behavior of soil and rock for engineering purposes, and for soil as a medium for plant growth. Topics of interest include: new testing equipment, apparatus, and procedures for both field and laboratory applications; evaluation of existing ASTM International standards and recommendations for new standards for apparatus or test procedures; and test results that give insights into test procedures, techniques, and data interpretation. Topics must be related to soil and rock, but may include use and testing of geosynthetic materials in conjunction with soil and rock, highway materials testing such as aggregate properties or pavement performance measurement, geophysical exploration, marine sediments, groundwater investigations, testing and stabilization of contaminated soils and soil and rock engineering related to waste management.
