Contents:
Special Issue on Advances in Laboratory Experimentation for Unsaturated Soils
Guest Editors: Oliver-Denzil S. Taylor, Laureano R. Hoyos, William J. Likos, and John S. McCartney

235 Editorial: Special Issue on Advances in Laboratory Experimentation for Unsaturated Soils—Oliver-Denzil S. Taylor, Laureano R. Hoyos, William J. Likos, and John S. McCartney

237 Redesigned Filter Paper Method: Protocol and Assessment Using Reconstituted Samples—Lucas Walshire, Woodman Berry, and Oliver-Denzil Taylor

255 Test Apparatus for Rapid Determination of Soil-Water Retention Curve under Isotropic Loading Condition—S. Roy and S. Rajesh

274 Assessment of Water Retention Test by Continuous Pressurization Method—Byeong-Su Kim, Masanori Hatakeyama, Seong-Wan Park, Hyun-Su Park, Yuji Takeshita, and Shoji Kato

290 Development of a Near-Surface SWRC Device (NSD) for Measuring Suction under Low Stress Environments—Oliver-Denzil S. Taylor, Amy L. Cunningham, and Lucas A. Walshire

308 Measurement of Suction Stress and Soil Deformation at High Suction Range—Yi Dong and Ning Lu

339 Comparison of Two Laboratory Methods for Measuring Soil Critical Temperature—Hyunjun Oh and James M. Tinjum

358 Apparatus for Coupled Effects of Suction, Temperature, and Stress on Thermal Conductivity of Unsaturated Sand—Jun Yeo, Ajkin Ozsoyl, Tengfei Wang, William J. Likos, and Tuncer B. Edil

373 Evaluation of the At-Rest Coefficient of Earth Pressure in Unsaturated Residual Soil with a New Suction-Controlled Device—Tácio M. P. de Campos, Ana Carolina de C. Viana, Thaiana A. Silva, and Lorena G. Abrantes

373 Evaluation of the At-Rest Coefficient of Earth Pressure in Unsaturated Residual Soil with a New Suction-Controlled Device—Tácio M. P. de Campos, Ana Carolina de C. Viana, Thaiana A. Silva, and Lorenzo G. Abrantes

440 Methodology to Characterize the Seismic Compression of Unsaturated Sands under Different Drainage Conditions—Wenyang Rang and John Scott McCartney

462 An Apparatus to Measure Gas Diffusion and Gas Permeability of Unsaturated Cup Barriers Subjected to Distortion—S. Rajesh and Y. Xian

483 Osmotic Oedometer Using Sodium Chloride Solution and Reverse Osmosis Membrane—Som Bualla and Erq-Choon Leang

502 New X-Ray Micromotography Setups and Optimal Scan Conditions to Investigate Methane Hydrate-Bearing Sand Microstructure—Thi Xiu Le, Patrick Kaelkelou, Michel Bernard, Baptiste Crabbe, Andrew King, and Anh Minh Tang

520 Laboratory Tests on Mitigation of Soil Liquefaction Using Microbial Induced Desaturation and Precipitation—Lyo Wang, Lean van Plassen, Yangi Gao, Jia He, Yiding Gao, and Deming Kim

TECHNICAL NOTE

535 Simple Testing Method for Measuring the Triaxial Stress-Strain Relations of Unsaturated Soils at High Suctions—Bo Chen, You Gao, De’an Sun, and Jie Li

Geotechnical Testing Journal: Volume 44, Number 2

Published by ASTM International | 100 Barr Harbor Drive | PO Box C700 | W. Conshohocken, PA 19428-2959
The purpose of the Geotechnical Testing Journal is (1) to provide a high-quality publication that informs the profession of new developments in soil and rock testing and related fields; (2) to provide a forum for the exchange of information, particularly that which leads to the development of new test procedures; and (3) to stimulate active participation of the profession in the work of ASTM International Committee D18 on Soil and Rock and related committees.

Contributions include papers, technical notes, letters to the editor, discussions of previously published papers, and book reviews. The editorial scope of this journal covers test methods for soil and rock, sampling, nomenclature, and practices relating to the determination of properties and behavior of soil and rock for engineering purposes, and for soil as a medium for plant growth. Topics of interest include: new testing equipment, apparatus, and procedures for both field and laboratory applications; evaluation of existing ASTM International standards and recommendations for new standards for apparatus or test procedures; and test results that give insights into test procedures, techniques, and data interpretation. Topics must be related to soil and rock, but may include use and testing of geosynthetic materials in conjunction with soil and rock, highway materials testing such as aggregate properties or pavement performance measurement, geophysical exploration, marine sediments, groundwater investigations, testing and stabilization of contaminated soils and rock engineering related to waste management.
