## Table of Contents

**Volume 21, 1993**

### No. 1, January

- Calculation for Rolling Contact Fatigue Life and Strength of Case-Hardened Gear Materials by Computer — JIANG BING-YUAN, ZHENG XITONG, AND WANG MINGLI  
- Up-and-Down Methodology Applied to Statistically Planned Experiments — R. E. LITTLE AND J. J. THOMAS  
- Contoured Wood Double Cantilever Beam Specimen for Adhesive Joint Fracture Tests — BRYAN H. RIVER AND E. ARNOLD OKKONEN  
- Time-Domain Ultrasonic NDE of the Wave Velocity of a Sub-Half-Wavelength Elastic Layer — VIKRAM K. KINRA AND CHANGYI ZHU  
- Testing the Superplastic Flow Characteristics of Advanced Aluminum Alloys — RAMON E. GOFORTH AND MALUR N. SRINIVASAN  
- Quality Assessment Tests for Nails — Y. J. CHIANG AND M. H. CHU  
- Use of a Proposed Test Procedure for Quantifying the Triboelectric Charging Propensity of Packaging Films — C. WILLIAM HALL, S. PAUL SINGH, AND GARY BURGESS  
- More Rapid Edgewise Crush Test Methods — THOMAS J. URBANIK, ARTHUR H. CATLIN, DAVIDE R. FRIEDMAN, AND RICHARD C. LUND  
- Performance of Hybrid Reinforcements in PVC Composites: Part I — Use of Surface-Modified Mica and Wood Pulp as Reinforcements — DEBESH MALDAS AND BOHUSLAV V. KOKTA  
- The Effect of Moisture on Laboratory-Prepared Asphalt Mixtures — WADDAI AKILI  
- The Effect of Wet Abrasive Wear on the Tensile Properties of Cotton and Polyester-Cotton Fabrics — JOSHUA OSAYANDE UKPONMWAN  

**TECHNICAL NOTE**

- Asbestos-Free Gasket Materials for Turbines — WILLIAM F. JONES AND BRU B. SETH

### No. 2, March

- Fatigue and Corrosion Fatigue of Beryllium-Copper Spring Materials — R. BAGHERI AND G. A. MILLER  
- Minimization and Quantification of Error Associated with the K Gradient and the Interval of Crack Length Measurement in Fatigue Crack Growth Testing — MORDEC AN OORE  
- Future of Water Treatment — PAUL R. PUCKORIUS  
- Sensitivity of Water Leak Tests for Latex Condoms — BRUCE A. HERMAN, RONALD F. CAREY, AND JEAN E. RINALDI  
- Effect of Internal Gas Pressure on the Compression Strength of Beverage Cans and Plastic Bottles — S. PAUL SINGH AND GARY BURGESS  
- Outliers in Interlaboratory Testing — JOHN MANDEL  
- Discussion on “Characterization of Early and Modern Wire for an Italian Harpsichord” by J. H. Underwood et al. — MARTHA GOODWAY  
- Closure — JOHN H. UNDERWOOD, WALTER BURR, A. ANTHONY KAPUSTA, AND CHRISTOPHER A. RICKARD

### No. 3, May

- Introduction of a New Dynamic Fracture Toughness Evaluation System — TOSHIRO KOBAYASHI, ISAMU YAMAMOTO, AND MITSUO NIHOMI  
- The Design of a Control System for a Superimposed Frequency Fatigue Test Machine — DAVID P. STOTEN AND DAVID J. SMITH  
- Axial-Torsional Fatigue: A Study of Tubular Specimen Thickness Effects — PETER J. BONACUSE AND SREE RAMESH KALLURI

[www.astm.org](http://www.astm.org)
The Gel Electrode Revisited: Fatigue Crack Detection with a Polymer Film—William J. Baxter

Novel Stage for Ultrasonic Measurement of Real Contact Area Between Rough and Flat Parts Under Quasi-Static Load—Andrei Polianik and Jan Kaczmarek

Evaluation of Static and Dynamic Contact Stresses in Simulated Granular Particles Using Stress Gages—Y. Xu and A. Shukla

The Vibration-Flex Test Method to Determine the Susceptibility of Plastic Films to Pinhole Formation Due to Flexing—J. V. Varughese and S. W. Gyeszly

Analysis of Marshall Test Behavior with Triaxial Test Determined Material Properties—Boon-Hwee Low, Siow-Ann Tan, and Tien-Fang Fwa

Infrared Technique as a Research Tool for Measuring Water Vapor Transmission of Roofing Membranes—O. Dutt, C. Lavalleé, and H. E. Ashton

Effects of Wash Temperature on Bacterial Survival and Strength Retention of Cotton Fabrics—Theresa A. Perench and Mary Ann Moore

No. 4, July

Fatigue Crack Initiation in Nonferrous Materials: A Model Assessment—Hamid R. Azimi and Gary A. Miller

Initiation and Stable Crack Growth Behavior of API X70 Steel at Low Temperatures (25°C ≥ T ≥ −95°C)—D. P. Romilly

Slice Synthesis Technique for an Embedded Crack in Residual Stress Fields—Toshihiko Nishimura

Determining Paint Adhesion to Wood Using a Uniform Double-Cantilever Beam Technique—Mark Knaebel and R. Sam Williams

Resonance Monitoring of Building Assemblies for Durability Tests—George Hearn and Rene B. Testa

Density Measurement of Cylindrical Specimens Within a Mold by Gamma-Rays—Tan Siow-Ann and Fwa Tien-Fang

An Improved Moisture Permeability Measurement Method—James S. Douglas, Thomas H. Kuehn, and James W. Ramsey

A Cutting Apparatus to Aid in the Preparation of Ring Specimens for Tensile Testing of Latex Condoms and Other Thin Elastic Films—Patrick Lennon and Wobaya Sisamang

Compressibility Analysis of Wet Abraded Woven Fabrics—Joshua Osayande Ukpongwa

Technical Note

Accurate and Precise Fabrication of Iosipescu Shear Test Specimens—Donald M. Blackketter and Edwin M. Odom

No. 5, September

Eembrittlement of an AISI 8640 Lower Bainite Steel—James V. Rinnovatore, Karl F. Lukens, James Reinhold, and William Mahon

A Detection Method of Fatigue Crack Initiation by Analyzing Strain Waveform—Chobin Makabe, Shin-Ichi Nishida, and Hideo Kaneshiro

Influence of Substrate Deformations on the Thermal Fatigue Life of SMT Solder Joints—Jacob B. Zafran and Bela I. Sandor

An Advanced Control Concept and Algorithm for Long-Term Data Acquisition in High-Temperature Fracture Mechanics Tests—Huimin Liu and Bilal Dogan

Some Microstructural Conditions for Evaluating Fracture Toughness and R-Curve Behavior in Platelet-Reinforced Composites—Giuseppe Pezzotti, Kenchi Minbara, and Toshihiko Nishida

Mean Stress Diagrams for Composites Generated Using a Modified Up-and-Down Test Methodology: Part I—Extensive Preliminary Data—R. E. Little

Mean Stress Diagrams for Composites Generated Using a Modified Up-and-Down Test Methodology: Part II—Limited Preliminary Data—R. E. Little

Characterization of Defects in Graphite Fiber Based Composite Structures Using the Acoustic Impact Technique (AIT)—P. K. Baju, J. R. Patel, and U. K. Vaidya

Metallized Microballoon Filled Composite EMI Shielding Materials—Donald W. Radford and Boyle C. Cheng

Lifetime Predictions of uPVC Pipes from Short-Time Tests—Ragnar Seldén and Per A. Gradin

A Mechanical Extensometer for High-Temperature Tensile Testing of Ceramics—K. C. Liu and J. L. Ding
Compaction of Asphalt Mixtures for Laboratory Testing: Evaluation Based on Density Profile — T. F. FWA, B. H. LOW, and S. A. TAN

Analysis of Jet Fuel Thermal Oxidation Deposits by Spectral Fluorometric Technique — JOHN L. BRICE

Characterization of Hypervelocity Impact Debris: Naval Research Laboratory Tests — BRYAN H. FORTSON AND JAMES E. WINTER

A Fiber Optic Chemical Sensor for Measurement of Groundwater pH — M. H. MAHER AND M. R. SHAHRIARI

Static Structural Integrity Monitoring System — Y. L. MO

No. 6, November

Maximum-Load Predictions in the Dugdale Model Using a Critical CTOA Criterion — INHOY GU

An Assessment of the Piezoelectric Ultrasonic Composite Oscillator Technique (PUCOT) for Measuring the Elastic and Technical Constants of Solids — A. WOLFENDEN AND M. R. HARMOUCH

Enhancing Thermal Hazard Awareness with Compatibility Charts — DAVID M. GAY AND DAVID J. LEGGETT

Laboratory Testing Procedure for Evaluation of Moving Bed Catalyst Attrition — PATRICIA K. DOOLIN, DIANNE M. GAINER, AND JAMES F. HOFFMAN

Dynamic Testing of the Strength of Helmet Chin Straps — ADAM GILCHRIST AND NIGEL J. MILLS

Techniques for the Determination of the Static and Dynamic Internal Friction Coefficients of Ceramic Powder — MIGUEL A. MARTINEZ, RAUL CORTES, VICENTE SANCHEZ-GALVEZ, AND CARLOS NAVARRO

Formulation and Application Technologies for Microbial Pesticides: Review of Progress and Future Trends — ROBERT J. CIBULSKY, BALA N. DEVISETTY, GARY L. MELCHIOR, AND BRIAN E. MELIN

WORKSHOP ON ACCURACY OF LOAD AND STRAIN MEASUREMENT OF TESTING MACHINES

Introduction — A. PERLOV

What’s New in Traceability — ERNEST L. GARNER AND STANLEY D. RASBERRY

Automated Data Acquisition and Load and Strain Measurement Resolution — FRED L. LEHMAN

Calibration Techniques for Extensometry: Possible Standards of Strain Measurement — ROBERT B. WATSON

The Use of Robotics to Eliminate Testing Variability in the Evaluation of Polymeric Matrix Composites Subjected to Three-Point Flexure — ROBERT B. CROMAN AND DANIEL W. JEFFERIS

Pressure and Flexible Membrane Effects on Direct-Contact Extensometer Measurements in Axisymmetric Compression Tests — KIRBY D. MELLEGARD, TOM W. PFEIFLE, ARLO F. FOSSUM, AND PAUL E. SENSENY

MOVING?

To insure uninterrupted service on your JTE subscription, please notify us at least six weeks before you move.

1. Attach your address label from a recent issue in the space provided opposite. (If label is not available, be sure to give your old address, including Zip Code.)

2. Print your name, membership no., and address below. (Be sure to include Zip Code.)

3. Mail entire notice to: ASTM
   Subscription Dept. — JTE
   1916 Race St.
   Philadelphia, PA 19103

Information for Contributors

The *Journal of Testing and Evaluation* (JOTE) is issued bi-monthly by ASTM. Each published paper and technical note is peer-reviewed. The guidelines below offer suggestions to authors and describe our manuscript selection, peer review, revision, and publication processes. Authors who adhere to these suggestions will ensure expeditious handling of submitted material.

Preparation of the Manuscript*

The submitted manuscript should be typewritten or printed, in English, on one side of a sheet only, double-spaced, with wide margins (at least 1 in. (25 cm)) on all sides. Pages must be consecutively numbered in single sequence—text, tables, and figures.

Five copies of the original manuscript are needed, each including clear copies of any figures.

The text should include an informative abstract of 100-150 words and a list of 5-10 keywords that can be used to index the contents of the manuscript.

ASTM policy requires the use of SI units in all publications (and in their included tables and figures). If English units must be used to present test results or to describe materials, equivalent SI units should follow in parentheses. Refer to ASTM E 390, Standard Practice for Use of the International System of Units (SI) (*The Modernized Metric System*) for further information and examples.

Commercialism may be avoided by the use of generic terms where possible. Trademarks and trade names should be properly identified as such, if they are used.

References should be cited in the text in numeric order. Type the numerical citation on the line, not as a superscript, and enclose in square brackets. The references should be listed together at the end of the text, in consecutive order, with enough information to allow a reader to find the cited item. See a recently published article in the Journal for the conventions used for papers, reports, books, and computer programs.

All tables should be placed together following the text and references. Tables should be identified with Arabic (not Roman) numbers, and cited in numerical order in the text. It is better to use several simple tables than one large, complex table.

All figures (graphs, illustrations, photographs) should be placed together following text and tables. A separate sheet of figure captions should precede the figures. Figures should be identified with consecutive Arabic (not Roman) numbers. Type size must be large enough to be legible after reduction. All lettering, lines, and symbols must be drawn with opaque black ink on white paper. The axes of each graph must be properly labeled, with specific units. Computer-produced graphs or illustrations must be made using a laser printer (not an impact printer). Photographs must be high-contrast black-and-white. All micrographs, and all figures that are representations of equipment or specimens, must include scale marks.

The name, mailing address, position, affiliation, and telephone (fax, e-mail) of each author must be supplied in a cover letter. The submitting author is asked to provide names, mailing addresses, affiliations, and telephone numbers of five potential reviewers who are not employed at the same institution as any of the authors. The submitting author must state that the contents of the manuscript have not been published previously and that the manuscript is not under consideration for publication elsewhere. The submitting author should affirm that all those given as co-authors have agreed to be so listed.

Technical Review

Each submitted manuscript that, in the opinion of the Technical Editor, fits the scope of the Journal, is technically sound, and will be of interest to the readership is processed for peer review. Three reviewers evaluate each paper, two each technical note. The reviewers consider technical merit, originality, soundness of data, reproducibility of results, logical conclusions, and clarity of presentation.

The reviewers’ comments are considered by the Technical Editor. Manuscripts that receive two or more unfavorable recommendations are rejected for publication in the Journal, and the authors are so advised. Manuscripts which the reviewers find acceptable pending amendment are returned to the authors for change, along with the (anonymous) comments of the reviewers. The authors subsequently may submit a revised manuscript.

Five copies of the revised manuscript are needed—one master with original figures; two copies highlighted to show where revisions have been made, and indicating which reviewer's comment has been addressed; and two plain copies. An "Authors' Response Form," provided by the editorial office, should be completed, showing where revisions were made, including any explanation concerning a suggested change not being made.

A "Paper Submittal Form," also provided by the editorial office, should be completed by the authors as well, assigning copyright to ASTM. The exception to this is for authors who are employees of the U.S. government.

Should a copy of the revised manuscript be available in computer-produced form, such as from a word-processing program like WordPerfect® 5.1, it may be included at this time with the paper copies mentioned above. Either 3.5 in. (89 mm) or 5.25 in. (133 mm) disks are acceptable. This expedites the handling of the article in the editorial office.

The Technical Editor may either accept the revised manuscript for publication, accept it pending further revision, or reject it. A revised manuscript may be sent for re-evaluation to a reviewer who had found major flaws in the first submission.

Each manuscript accepted by the Technical Editor for publication is further scanned by the editorial staff for proper ASTM conventions and for appropriate English style and usage. The final version, including any editorial changes, is sent to the author before it is typeset.

Following author approval, the article is set into print and the page proof is delivered to the author for approval. Should the editorial office not hear from the author in the designated response time, approval is assumed and publication proceeds.

Other Published Items

Some items appear in the Journal without peer review. Thus, brief comments on a previously published article, the authors’ response to these comments, and critical reviews of books or computer programs require the approval only of the Technical Editor.

Dr. Donald R. Petersen
Technical Editor

*For complete instructions for the preparation of manuscripts and a sample manuscript: contact Barbara Stafford, Administrative Assistant, ASTM Journals, 215-299-5424 or FAX 215-299-3511.
