4039 Spatial Data Indexing and Query Processing in GeoCloud—Karthik Shankar and Pradeep Sengupta

4054 An Enhanced Hybrid Clustering Approach for Privacy Preservation (ECPs) in Big Data using Apache Spark Framework—Revanth Swaminathan and Alokkrishnan Thangamuthu

4057 A Transdisciplinary Approach to Classify Thyroid Levels in Patients—Sujatha Radhakrishnan, Ayyari Senthilkrishnan, Suresh Kumar Venkatesh, and Bakary Diarra

4077 An Efficient Multidate Weight Updated Haralick and Relevance Vector Machine Algorithm for Classifying Diabetic Foot from Medical Thermal Image—Abdul Noori Baysarkar, Gajamani and Sivaguru Prabu

4096 Link-Based Clustering Algorithm for Clustering Web Documents—P. Arichanan and S. Shen

4161 An Enhanced Hybrid Feature Selection Approach for High Dimensional Data Processing—Bhavya Trinca Lincy and Suresh Kumar Nageshwaran

4177 The Perceptual Differences of Hospital Employees on the Use and Adoption of Electronic Health Records and Telemedicine—Pubudu Weerasinghe and S. Manimohan

4192 Optimized Inventory Control on Construction Materials by Application of E-Technology Transfer along JIT—Rajesh Harsha Varahana and Pushpa Venkatesh

4212 A Novel Tribometer Designed to Evaluate Geological Sliding Contacts Lubricated by Drilling Muds—Philip Egberts, Nicholas Simin, Calvin Wong, Grant Bevill, and H. Thomas Baker

4223 Construction of a Supplier Evaluation Model in the Aerospace Sector—Philip Egberts, Nicholas Simin, Calvin Wong, Grant Bevill, and H. Thomas Baker

4239 Detection of an Electromotive Force during Resistance Spot Welding and its Correlation with Nugget Growth—Hriniten Talayeh, Yoko Hasegawa, and Yuchi Matsu

4249 Diagnosis of Photovoltaic (PV) Panel Defects Based on Testing and Evaluation of Thermal Image—J. Lins, C. Huang, J. Huang, and N. Salize

4263 Economic Efficiency of Rectifying AQOL Plans Based on the EWMA Statistical-Novel Evaluation

4272 Effect of Experimental Variables on Nanomechanical Properties of PKC via AFM Indentation—Jaewon Yoo, Mengyu Liu, and Yifan Niu

4296 Effect of Text Geometry and Aggregate Texture on Angle of Repose of Aggregates—Anusha Nithya Senthil, Varun Malhotra, Premkumar Singh, and Gunther Venkata Ramana

4311 Construction of a Supplier Evaluation Model in the Aerospace Sector—Jiawei Yao, Mengyao Liu, and Yifan Niu

4322 Effect of Experimental Variables on Nanomechanical Properties of PKC via AFM Indentation—Jaewon Yoo, Mengyu Liu, and Yifan Niu

4331 Long-Lifetime and Low Latency Data Aggregation Scheduling for Wireless Sensor Network—Jawwar T. Ilyas, Mohammad Maleki, and Reza Shafii

4341 32-Bit One Instruction Core: A Low-Cost, Reliable, and Fault-Tolerant Core for Real-Time and Embedded Systems—Subharanjan Sen, Subhash Janakiraman, and A. Choudhri

4348 Intercluster Link Management for Quality of Service Development by Mitigating the Hidden Node Problem in Wireless Sensor Networks—Rohit Ravi, Ravi Samikannu, Sampath Kumar Venkatesh, and Bakary Diarra

4354 Analysis of Energy-Efficient Clustering Algorithms for Wireless Sensor Network (WSN)—Arun Ranganathan and Balamurugan Ramasamy

4364 Detection of Heart Abnormalities Using Fuzzy Decision Making and Wireless Transmission of Disease Information—Geeta Saxi, Munna Subraman Mohan Chandran, and Moreno Chirasso

4388 Distributed Computing Model of Multispectral Time Series Data Analysis for Chlorophyll Concentration Determination Using Ocean Color Monitor-1 Data—M. Prabu and S. Margret Annuncia

4395 A Comparative Analysis of Energy-Efficient Protocols for WBAN on Heterogeneous Transceivers—Kumarasan Perumal and Prabukumar Manoharan

4398 Improving Energy Efficiency in Wireless Sensor Networks through Virtual-Backbone-Based Topology Control—Sivakumar Subash, Subharanjan Sen, and A. Choudhri

4401 Diagnosis of Cancer Using Hybrid Clustering and Convolution Neural Network from Breast Thermal Image—Ayyari Senthilkrishnan, Sujatha Radhakrishnan, Gajamani and Sivaguru Prabu

4409 Detection of Heart Abnormalities Using Fuzzy Decision Making and Wireless Transmission of Disease Information—Geeta Saxi, Munna Subraman Mohan Chandran, and Moreno Chirasso

4412 A Comparative Analysis of Energy-Efficient Protocols for WBAN on Heterogeneous Transceivers—Kumarasan Perumal and Prabukumar Manoharan

4414 Intercluster Link Management for Quality of Service Development by Mitigating the Hidden Node Problem in Wireless Sensor Networks—Rohit Ravi, Ravi Samikannu, Sampath Kumar Venkatesh, and Bakary Diarra

4418 Analysis of Energy-Efficient Clustering Algorithms for Wireless Sensor Network (WSN)—Arun Ranganathan and Balamurugan Ramasamy

4423 Construction of a Supplier Evaluation Model in the Aerospace Sector—Jiawei Yao, Mengyao Liu, and Yifan Niu

4427 Long-Lifetime and Low Latency Data Aggregation Scheduling for Wireless Sensor Network—Jawwar T. Ilyas, Mohammad Maleki, and Reza Shafii

4431 32-Bit One Instruction Core: A Low-Cost, Reliable, and Fault-Tolerant Core for Real-Time and Embedded Systems—Subharanjan Sen, Subhash Janakiraman, and A. Choudhri
Contents:

Special Section: Advanced Intelligence in Information Science and Communication Systems
Guest Editor: Mohansundaram Ranganathan
iv Overview
3851 Intercluster Link Management for Quality of Service Development by Mitigating the Hidden Node Problem in Wireless Sensor Networks—Babu Bao, Ravi Samikannu, Sampath Kumar Venkateshram, and Balasya Dinna
3864 Analysis of Energy-Efficient Clustering Algorithms for Wireless Sensor Network (WSN)—Arun Ranganathan and Balasubramanian Rangasamy
3878 Long-Term and Low Latency Data Aggregation Scheduling for Wireless Sensor Network—Jayaswaran Gopinath, Mohan Phante, Ramalish Mangayarkaran, and Ramanathan Sridharan
3893 Detection of Heart Abnormalities Using Fuzzy Decision Making and Wireless Transmission of Disease Information—Gang Chen, Monica Subashini Mohan Chandran, and Monaliza Chandrasekaran
3912 A Comparative Analysis of Energy-Efficient Protocols for WBAN on Heterogeneous Transceivers—Kumeran Perumal and Prabukumar Manoharan
3928 Improving Energy Efficiency in Wireless Sensor Networks through Virtual- Backbone-Based Topology Control Mechanism—F. Siva Kumar, Subhasis Jaisankar, and K. Chandraprabha
3941 22-Bit One Instruction Core: A Low-Cost, Reliable, and Fault-Tolerant Core for Multicore Systems—Subbiah Janakiraman, Subashini Mohan Chandran, and Raja Ram Pancharatnam
4004 Aspect-Oriented Modeling of Spatial Data Interpolation for Estimating Missing Data in Internet of Things (IoT) Service Discovery—Surendra Murugan Balakrishnan
4017 Secure and Optimized Real-Time System for Internet of Medical Things Using MATLAB and ThingSpeak Analytics—J. Jennifer Ranjani, J. Uma, C. Muniraj, and N. Sathya
4024 Analysis of Energy-Efficient Clustering Algorithms for Wireless Sensor Network (WSN)—Arun Ranganathan and Balasubramanian Rangasamy
4039 Spatial Data Indexing and Query Processing in GeoCloud—Karth Subramani and Pradeep Sivapraga
4054 An Enhanced Hybrid Clustering Approach for Privacy Preservation (ECPJ) in Big Data using Apache Spark Framework—Revathy Swaminathan and Aksharwane Sharmil
4067 A Transdisciplinary Approach to Classify Thyroid Levels in Patients—Sujatha Radhakrishnan, Abhishek Sheewati Lokeshwaranayanan, Radhakrishnan Bhaskar, and Gopinath Ganapathy Subramonian
4077 An Efficient Multiangle Weight Updated Haralick and Relevance Vector Machine Algorithm for Classifying Diabetic Foot Text from Medical Thermal Image—Abdu Paradox Anugra and Sivagun Prabu
4096 Link-Based Clustering Algorithm for Clustering Web Documents—P. Ashokkumar and S. Don
4112 A Novel Tribometer Designed to Evaluate Geological Sliding Contacts Lubricated by Drilling Muds—Grant Bevill and H. Thomas Baker
4123 Construction of a Supplier Evaluation Model in the Aerospace Sector—Jan Czibor, Curtis Ewanchuk, and Simon Park
4128 An Analyzing of Cross Layer Design for Implementing Adaptive Antenna Techniques in Mobile Ad Hoc Networks—Abhijit Kumar Subramaniam and Gun Selvar Thangamuthu
4131 A Comparative of the ASTM F2508 and ANSI/NFSI B101.3 Walkway-Safety Triomtry (Standards Using Measurements from Two Different Tribometers—Giret Bafika and H. Thomas Baker
4134 A Novel Tribometer Designed to Evaluate Geological Sliding Contacts Lubricated by Drilling Muds—Grant Bevill and H. Thomas Baker
4141 Cost Optimization and Development of Hybrid Energy Systems for Rural Areas in Bhutan with a Balance of Total Energy Need and Resources Availability (A Case Study—On Yukubumi)—Run Saramkumar, K. Sampathkumar, Balamurugan Dana, and Robert Bell
4159 Diagnosis of Cancer Using Hybrid Clustering and Convolution Neural Network from Breast Thermal Image—Arathy Sanushtha Lokeshwaranayanan, Sujatha Radhakrishnan, Gajanan Anugra Paradox, and Sevugan Prabu
4177 The Perceptual Differences of Hospital Employees on the Use and Adoption of Electronic Health Records and Telemedicine—P. Velmogalipal and S. Mullai Prabu
4179 Diagnosis of Photovoltaic (PV) Panel Defects Based on Testing and Evaluation of Thermal Image—J. Uma, C. Muniraj, and N. Sathya
4189 A Transdisciplinary Approach to Classify Thyroid Levels in Patients—Sujatha Radhakrishnan, Abhishek Sheewati Lokeshwaranayanan, Radhakrishnan Bhaskar, and Gopinath Ganapathy Subramonian
4192 Optimized Control Structure for Determining Structural Materials by Application of E-Technology Transfer along JIT—BalaJay Hasha Varaarnana and Pushkar Venkatesh
4199 A Comparison of the ASTM F2508 and ANSI/NFSI B101.3 Walkway-Safety Triomtry (Standards Using Measurements from Two Different Tribometers—Giret Bafika and H. Thomas Baker
4212 A Novel Tribometer Designed to Evaluate Geological Sliding Contacts Lubricated by Drilling Muds—Grant Bevill and H. Thomas Baker
4223 Construction of a Supplier Evaluation Model in the Aerospace Sector—Jan Czibor, Curtis Ewanchuk, and Simon Park
4239 Detection of an Electromotive Force during Resistance Spot Welding and its Correlation with Nugget Growth—Hironori Tohmyoh, Yuta Hasegawa, and Yoichi Matsui
4249 Diagnosis of Photovoltaic (PV) Panel Defects Based on Testing and Evaluation of Thermal Image—J. Uma, C. Muniraj, and N. Sathya
4256 Economic Efficiency of Rectifying AOQL Plans Based on the EWMA Stability—Niko Kaspriko
4272 Effect of Experimental Variables on Nanomechanical Properties of PEK-C via AFM Indentation—Jiawei Yao, Mengyao Liu, and Yifan Niu
4289 Effect of Text Geometry and Aggregate Texture on Angle of Repose of Aggregates—Aravind Krishna Swamy, Varun Matolia, Parminder Singh, and Gunasekaran Balakrishnan

EDITORIAL OBJECTIVES
The Journal of Testing and Evaluation is published in six issues per year by ASTM International, a nonprofit technical organization that develops and publishes voluntary consensus standards and related information for materials, products, systems, and services. Some issues, in whole or in part, may be Special Issues focused on a topic of interest to our readers. Contributions are peer reviewed prior to publication.

EDITORIAL SERVICES—SUBMISSIONS
Sara Welliver
Supervisor, Peer Review Services
Journal of Testing and Evaluation

astm@jeditorial.com

PURPOSE AND SCOPE
The editorial objectives of the Journal of Testing and Evaluation is to serve a broad-based audience by:
- Publishing new technical information derived from the field and laboratory testing, performance, quantitative characterization, and evaluation of these materials, products, systems, and services.
- Presenting new methods and data and critical evaluations of these methods and data.
- Reporting the users’ experience with test methods and the results of interlaboratory testing and analysis.
- Providing the scientific basis for both new and improved ASTM International standards.
- Stimulating new ideas in the fields of testing and evaluation.
- Including papers, technical notes, letters to the editor, discussions of previously published papers, and book reviews as contributions.

IN APPRECIATION OF THE REVIEWERS

The high quality of the papers that appear in this publication is a tribute not only to the obvious efforts of the authors represented but to the unheralded, though essential, efforts of their reviewers. It is to the reviewers dedication to upholding the high standards of their profession that this note pays tribute. On behalf of ASTM International and the authors as well, we acknowledge with appreciation.

Information for Authors

For details regarding paper submission go to http://mc04.manuscriptcentral.com/astm-jote.

The subject matter must not be of a speculative nature and the contents must not include materials of an advertising nature. The paper must not be seriously defective as to literary form and structure, continuity of thought, and clarity of expression. The substance of the paper should not have been published previously in the open literature.

Authors preparing papers for submission should observe the conventions of style explained in the ASTM Style Manual. Since the journal does not request page charges, the author is expected to conform to these standard conventions for style and the inclusion of complete references and high-quality figures. SI units are to be used throughout; if data were not measured in SI units, a note should appear to that effect and the original units should be included in parentheses after the SI units.

Journal of Testing and Evaluation (Print ISSN 0090-3973; E-ISSN 1945-7553) is published in six issues per year by ASTM International. Some issues, in whole or in part, may be Special Issues focused on a topic of interest to our readers. The views expressed in this journal are not those of ASTM International. The data and opinions appearing in the published material were prepared by and are the responsibility of the contributors, not of ASTM International.

Overview

Information science and communication systems play a vital role in everyday lives, and with greater advancements in technology, the enormous growth of computational intelligence can benefit several sectors. For many decades, ASTM International’s Journal of Testing and Evaluation (JTE) has continuously presented special issues on computational intelligence and information systems, and this initiation paves the path for researchers to contribute new ideas and methods towards the development of efficient communication systems; moreover, the continuous exposure in information science and communication systems provides a platform to develop more robust approaches. The aim of this special section is to highlight the unique areas of communication systems and their applications, as well as various innovations in multi-discipline areas, and also to present some technical remonstrance and its countermeasure.

All the papers that appear in this special section review methods, challenges, and remedies, various applications and domains, and develop new information systems and communication systems and models.

The first six papers by Ravi, Arun, Vanitha, Geetha, Kumaresan, and Sivakumar deal with Wireless Sensor Networks (WSN), which are an evolving field with unique features, including the ability to easily deploy with several distinct applications. Normally, sensor networks consist of tiny nodes with restricted computing and communication capabilities. WSN is the biggest share of studies in the last century. The papers presented focus on WSNs and activities such as routing, energy efficiency protocol, data scheduling, fuzzy decision making, disease prediction in healthcare, and management considerations in these unique problems. This unique problem ultimately covers a wide variety of subjects in the paradigms and developments of WSNs. It is both for educational audiences (postgraduates, educators, and students) and professional audiences. It is presumed that readers are acquainted with the ideas and paradigms of WSN concepts and their associated ideas. It guides developers of technology solutions from academia, research institutions, and industry, giving them a broader view of wireless sensor networks.

The next paper, by Shashikiran Venkatesha, addresses a fault-tolerant for the multicore processor that can run multi-threaded applications quicker than the multiprocessor scheme that consists of various single-core processors; this is due to the brief range between them, which allows the processors to interact more quickly with the multicore processor. In this paper, the author states that having a multicore processor is also cheaper than having various single-core coupling processors. However, with an increase in the number of cores, it proves inefficient to use the bus as an interconnection with growing complexity. The increasing number of cores raises the demand for a strong subsystem for memory. An attempt was produced in this unique problem to evaluate the effect of memory size on multicore processor performance by varying memory size.

The next two papers, by Paulin and Aarthy, focus on the deep learning approach. Deep learning has become an incredibly active study area that paves the way for the learning of contemporary machines. Deep learning is widespread with applications for disease diagnosis, audio/visual speech recognition, and machine learning. Leading technology companies (such as Apple, Google, Facebook, Microsoft, etc.) and research institutions are engaged in researching this hot artificial intelligence method, which includes data analytics and machine learning applications. These two papers focus on the challenges and remedies in the field of speech recognition and healthcare disease diagnosis based on the thermal images.

Recent advances in various fields of growth and research are enabling new distributed systems and associated applications. According to Cisco Visual Networking Index: Global Mobile Data Traffic Forecast Update (https://www.cisco.com/c/en/us/solutions/collateral/service-provider/visual-networking-index-vni/white-paper-c11-738429.html), it has been estimated that the number of mobile devices in the year 2020 will increase to 27.1 billion, which is approximately equal to the world’s population in that same year. In the following paper, author Prabu focuses on an ocean color monitoring system with a distributed computing model to cover the large spatial data. This article also focuses on normalized
difference vegetation index with uncertainty generation techniques and the methods that have been used for ocean surfaces.

The Internet of Things (IoT) is a pervasive trend that transforms all we do and the infrastructure that promotes us. From smart cities and homes to Industry 4.0, businesses, critical infrastructure, healthcare, retail, and wearables, vast information flows are progressively processed using machine learning algorithms—which is changing our lives. This unprecedented scale, omnipresence, and interconnectivity also generate an atmosphere in which the safety and integrity of these applications become a major problem. The next two papers, by Balakrishnan and Ranjani, focus on the association of missing data in spatial data. An easy technique of machine learning, such as clustering, can organize and group distinct information, after which it is possible to use other cognitive and predictive methods to enhance results.

The following papers by authors Prabu and Karthi focus on cloud computing with biometric systems and spatial data indexing. The advancement of spatial data analysis and biometric systems with cloud computing provides a different platform for the researcher to devote novel ideas and methods. With enhancing information range and veracity, it has become more difficult to accomplish such processing within an appropriate timeframe. The current cloud infrastructure is a sub-optimal solution for these situations as the produced information is transmitted to different remote cloud centers. However, in these articles, the authors clearly state that integrating machine learning methods into the current cloud can provide enhanced efficiency. There is also a large amount of data stored in the cloud that can be used as input for the biometric system and spatial data analysis. These articles will be useful for researchers and senior-level graduates in related fields. They provide a reference path for system designers, researchers, and practitioners in a distributed environment.

Revathy’s article reviews the importance of safety for big data. Many sectors and governments now recognize big data. Big data’s effective mining allows businesses to enhance their competitive advantage and add value to many social and economic industries. Indeed, several governments have initiated major projects with enormous investments to extract the highest advantage from big data. Also, significant attempts have been made by the private sector to maximize earnings and optimize resources. Big data sharing, however, brings new safety and privacy issues. When implemented in the context of big data, traditional techniques are no longer suitable. This particular problem introduces the difficulties of big data safety and state-of-the-art techniques, processes, and solutions used to safeguard data-intensive information systems.

The papers by Sujatha, and Gopinath, Ashokkumar, and Ranganathan center on the analysis of machine learning models and their applications. Current organizational machine learning and technological advances include thermal image processing, artificial intelligence, information science, robotics, and prediction models, as well as a broad range of techniques. The constantly evolving machine learning landscape makes staying up-to-date in the field difficult for professionals. These articles describe: (1) Fundamental concepts and theories of machine learning, (2) methodologies of development and design, (3) development of new software tools and techniques, (4) healthcare and business application, (5) organization and social data analysis, (6) surveillance data analysis, (7) data clustering, and (8) diabetes disease prediction using thermal image.

The papers by Saravanan and Subramaniam discuss the analysis of mobile networks and their impact. Mobile communication, mobile devices, and mobile computing are now widespread. The Mobile Computing and Commerce Encyclopedia (2007, IGI Global, Hershey, PA) introduces papers to readers that cover a broad variety of mobile technologies and their applications. However, the authors review many problems and difficulties that still need to be resolved, such as mobile marketing, mobile advertising, mobile payment, and voice-based mobile permission. This involves using evolving mobile technology like radio frequency identification and sensor networks.

The next paper, a case study by Ravi in Ethiopia, presents a new energy system for wind and solar energy by using HOMER software. In this case study, the author also addresses solar radiations, wind energy potential, and the cost of the energy system.

The paper by Blessy Trenicia Lincy focuses on the importance of feature selection in data mining preprocessing methods. Pre-processing of data is an essential step in data mining. Many researchers devoted their novel ideas to improve feature selection methods. However, the enormous growth of data creates
new challenges and limitations. In this article, the author reviews a selection of methods and develops a new wrapper-based hybrid feature selection technique; the author also discusses the importance of the featured selection and its characteristics and advanced methods.

The next paper, by Pulidindi, discusses the importance of technology to handle electronic health records and telemedicine in hospitals. This research study is carried out in Vellore district, Tamil Nadu, India.

The final paper by Harshass addresses e-technology development in construction industries. The author highlights the benefit in e-technology in supply chain management in construction domains. The author also discusses the significant improvements on e-technology in procumbent system.
